PROFESSIONAL SUMMARY

Master of Artificial Intelligence candidate at Monash University (graduating December 2026) with hands-on experience building full-stack AI applications, RAG pipelines, and Agentic AI systems. Proven ability to ship production-ready software through three software engineering internships, with strong skills in Python, React, JavaScript, and PostgreSQL. Seeking a graduate AI or software engineering role where I can apply Python, LLM integration, and production deployment skills to real-world problems.

TECHNICAL SKILLS

AI/ML: PyTorch, TensorFlow, LLM API integration, prompt engineering, computer vision, RAG pipelines, embeddings, ChromaDB, agentic AI, Ollama
Languages: Python, JavaScript, TypeScript, C#, C/C++, Java, Swift
Frontend: React, HTML, CSS
Backend & Databases: .NET, REST APIs, SQL, PostgreSQL, Supabase
Cloud & Deployment: AWS, Vercel, serverless functions, Git, GitHub

WORK EXPERIENCE

Front End Developer Intern | *Avocademy (Y Combinator), United States* *May - Aug 2023*

- Rebuilt the internal tool UI in React and CSS, reducing page load time by 70% and improving daily navigation efficiency for internal teams.
- Delivered 8 production-ready React components for the company website, achieving a 90% test pass rate before release by writing Jest unit tests covering form validation, rendering, resizing, and routing.

Software Engineer Intern | FPT Software, Hanoi, Vietnam *May – Aug 2022*

- Built and improved 6 features for an internal employee performance tracking platform using JavaScript, TypeScript, HTML, and CSS, increasing attendance log and task assignment accuracy from 80-85% to 95%.
- Resolved customer-reported software defects, with all assigned bug tickets confirmed closed by team lead.

Software Engineer Intern | *Harmony Advanced Technologies, Hanoi, Vietnam* *Mar – May 2021*

- Resolved 9 of 13 reported bugs across 7 client applications using C# and C++, eliminating the majority of known issues before the next release cycle.
- Led development of 3 applications and 1 website using Java, JavaScript, HTML, designing and shipping an HR management prototype using WinForms, C#, and XML, earning positive sign-off from the team lead with no follow-up complaints.

PROJECT EXPERIENCE

GreenChanger | GitHub | Website Aug 2026 - Oct 2026

- Built the React frontend for GreenChanger, an urban-greening website: users search a Melbourne address, view the 3D map with canopy and heat data, then either simulate placing a tree, compare species on canopy, shade, and cost before saving the selected scenario to the city council desired simulation database.
- Integrated FastAPI and PostgreSQL APIs, an LLM chatbot that answers from live map data, and a council canopy heatmap with PDF export, improved responsiveness with code splitting and caching.

JARVIS (In Progress) | GitHub May 2026 – Present

- Built a local-first AI assistant in Python using **Ollama** with a RAG pipeline powered by ChromaDB and **nomic-embed-text** embeddings for context-aware responses, long-term memory system that summarizes conversations and stores them in a vector database, with an agentic tool-calling loop for macOS app control, file management, and voice I/O.
- Designed for local-first, offline-capable operation, integrating faster-whisper for speech-to-text and Piper TTS for text-to-speech to enable fully-voice-driven interaction without cloud dependency.

Nutrition Coach AI | GitHub Nov 2025 – April 2026

- Built a full-stack AI nutrition app that generates recipe suggestions in 10–15 seconds and AI assistant replies in 1–2 seconds, using a third-party LLM API with structured prompt engineering.
- Deployed a Supabase and PostgreSQL backend supporting user authentication, protected routes via Row Level Security, and persistent chat history, with serverless API functions on Vercel using GitHub Preview Deployments.

EDUCATION

Master of Artificial Intelligence | Monash University *Mar 2025 – Dec 2026*
B.S. Computer Engineering | University of Massachusetts-Amherst *Sep 2020 – May 2024*
